

VANTRO

GDPR Quick-Reference

Talking points for the installer briefing

Purpose of this document

This is a short reference for managers and contract leads (like Andy) who will be briefing installers on the Vantro rollout. It captures the key reassurances you can give the team — backed by what the app actually does, not just what a policy says.

For the full detail, see the Privacy Policy, the Data Processing Agreement, and the GPS Tracking Explainer. This document is the summary.

Headline reassurances

1. Tracking is shift-scoped, not 24/7

The app does not track installers when they are not signed in to a shift. There is no passive background tracking. If an installer hasn't tapped Sign in, the app captures nothing — morning, evening, weekend, or any other time. This is how the app is built, not a setting an admin can change.

2. Sign-in requires an active tap

Tracking only starts when the installer taps the Sign in button in the app. There is no automatic tracking based on schedule. The installer is in control of when their shift starts being recorded.

3. The installer can see their own data

Every GPS ping, every sign-in time, every diary entry — the installer can see all of their own data inside the app. Nothing is hidden from them.

4. The purpose is operational, not surveillance

The GPS audit trail exists for three specific operational reasons: proving on-site hours for client invoicing, creating an audit trail in case of post-completion defect disputes, and helping the office dispatch and schedule efficiently. It is not designed for monitoring how long anyone takes for lunch.

5. The system has a built-in grace window for breaks

In the last 2 hours of a scheduled shift, leaving the job site does not end the shift automatically. The system intentionally allows lunch breaks, parts runs, and finishing up early. This is built into the code, not an admin policy.

6. When you're not signed in, the app does nothing

Tracking is tied to being signed in to a shift, not to a clock time. If an installer hasn't tapped Sign in, the app captures no location. Period. This applies any time of day — morning before work, evening after work, weekends, days off.

Separately: push notifications have a quiet window between 19:00 and 07:00 UTC, so no sign-in or sign-out reminders are sent during that window. This is about notifications only and does not affect tracking (because tracking is shift-scoped, not clock-scoped).

Common questions and how to answer them

"Will my boss know if I take a long lunch?"

In the last 2 hours of your scheduled finish time, no — the system intentionally allows lunch breaks, parts runs, and finishing up early without ending the shift. Earlier in the day, if you leave site for an extended period the app may end the shift automatically (assuming you're done), but ordinary short breaks within sight of the site stay within the geofence and aren't flagged. The system is designed for real working patterns, not minute-by-minute monitoring.

"Can my boss see where I am right now if I'm not working?"

No. The app only captures location when you are signed in to a shift. If you are not signed in, no location data is being captured at all.

"What happens if I forget to sign out?"

The system will automatically close your shift 2 hours after your scheduled finish time. Your employer will be flagged that you didn't sign out manually, but nothing buzzes on your phone. You can sign out from the app the next time you open it.

"Who else can see my data?"

Your employer can see your GPS audit, sign-in/out times, and diary entries — same as if you'd written them on paper. Other installers in your company cannot see your data unless they have admin access. Vantro's own staff can only access your data for technical support or legal reasons, and any such access is logged.

"Can I see what's been recorded about me?"

Yes. Inside the app, go to Me — you'll see your shift history. Under GDPR you also have the right to request a full copy of your data. Ask your employer first, or contact Vantro directly.

"What if I don't want to use the app?"

This is a conversation with your employer, not with Vantro. The app is a tool your employer has chosen to use for the business. Your employer can explain the operational reason and how it relates to your contract. From a Vantro standpoint, we offer the same rights and transparency to every installer regardless of which company they work for.

What you can hand to installers

Three documents, in order of priority:

- GPS Tracking Explainer — give this to every installer before they use the app. It is the single most important document.
- Installer How-To Guide — the practical walkthrough. Pair it with a 5-minute live demo.
- Privacy Policy — for any installer who wants the full legal version. Few will ask, but it should be available.

If an installer raises a concern

First — listen. The concern is usually about respect and control, not about the technical details of GPS pings. Acknowledge the concern.

Second — be specific. Point to the GPS Tracking Explainer. Show them what the app does and does not do.

Third — let them see their own data. Open the app on their phone, tap Me, and walk through what's actually captured. Most concerns evaporate once people see it themselves.

If a concern can't be resolved, escalate to your employer's data protection lead, or to Vantro at aileen@applyscale8.com.

If the ICO contacts you

Unlikely, but: if you receive any correspondence from the Information Commissioner's Office about Vantro processing, please contact us at aileen@applyscale8.com immediately. We will provide all reasonable assistance.

Where to find everything

All Vantro documents are available from your employer's office admin, or by emailing aileen@applyscale8.com:

- Privacy Policy.
- Data Processing Agreement.
- GPS Tracking Explainer (installer-facing).
- Installer How-To Guide.
- This Quick-Reference.
